Study Execution & NI 43-101 Disclosure

Tailored engineering expertise, strategic oversight, and long-term continuity, ensuring project success while addressing resource constraints and bridging the gap between study and execution phases.

Overcoming Execution Challenges

Junior mining companies face significant challenges while executing project studies and ensuring compliance with NI 43-101 disclosure requirements. Resource constraints, lean teams, and complex study demands often result in misaligned goals, inefficiencies, and costly delays.

The traditional EPCM model frequently fails to provide the continuity and project alignment needed to bridge the gap between study preparation and execution planning, jeopardizing project success. Already stretched thin, project managers need a reliable partner who offers engineering expertise, strategic oversight, and scalable support to navigate these challenges effectively.

Expertise, Continuity, and Strategic Alignment for Study Success

Success starts with the right partner when it comes to executing project studies and complying with NI 43-101 disclosure requirements. TMG provides the right partnership that guides the advancement of mining projects through the critical study phase, delivering tailored engineering solutions, strategic leadership, and long-term continuity. Our approach ensures your project aligns with disclosure standards and operational goals, reducing risks and laying the foundation for successful execution.

Why Choose TMG for NI 43-101 Study Execution?

TMG delivers a unique combination of technical expertise, strategic leadership, and scalable support to ensure your NI 43-101 study is compliant and fully aligned with your project goals, setting a solid foundation for success.

- **Engineering Expertise You Can Trust:** We deliver comprehensive engineering services tailored to meet the stringent requirements of study execution and NI 43-101 disclosures. From conceptual designs to pre-feasibility and feasibility studies, we ensure that every aspect of your project is practical, compliant, and optimized for execution readiness.
- **The Owner's Team Advantage:** With years of experience as an Owner's Team, TMG operates with the mindset of mine owners and operators. We ensure your study reflects operational realities and is aligned with disclosure needs.
- **Tailored Solutions for Lean Teams:** For mining firms with limited resources, TMG's scalable Owner's Team approach extends your team, enabling you to meet study requirements without overstressing your capacity.
- **Seamless Execution Gating:** We collaborate seamlessly with your preferred EPCM execution firm during the transition. By remaining part of your Owner's Team through execution, TMG maintains the team's continuity and ensures the alignment of project history and scope decisions made in previous gates. This minimizes risks and ensures a smooth, compliant project delivery.

Innovative Solutions for Every Stage of Your Project

At TMG, we understand mining companies' unique challenges during project development. That's why we offer flexible, strategic solutions that address cash flow constraints, ensure seamless execution continuity, and provide essential support for overloaded Project Managers.

- **Stage-Gate Acceleration (SGA) Equity Delivery Model:** For firms facing cash flow limitations during early project stages, TMG offers an equity-based service model that aligns our success with yours. This ensures your project receives the support it needs without immediate financial strain.
- **Continuity Through Execution:** Upon completion of the studies phase and project funding is approved, TMG provides unmatched continuity by staying with your project as part of the Owner's Team during execution. This ensures a seamless transition and minimizes the risk of miscommunication or scope misalignment.
- **Support for Overloaded Project Managers:** Project Managers often have multiple responsibilities. TMG's Owner's Team approach lightens the load by providing expertise and resources to keep projects on track, ensure all engineering deliverables are reviewed in due time, and achieve the overall objectives.

Let's Transform Your Mining Project Together

Whether in the study or execution phase, TMG is here to support your project's advancement through the various stage gates and provide our execution expertise to enhance project outcomes. Contact us today to schedule a consultation and learn how our approach can set your project on the path to success.
